

# GENDER MATTERS

## 10 minutes for a change of perspective

**What can we learn if we bring together topics such as land use, sustainability and gender, rather than considering them separately? We hope to find this out in a series of short lectures!**

Speakers from the scientific community, policy makers, and field practitioners will address current challenges for land use, resource management, agriculture and related areas from different perspectives. They have chosen to focus on the insights and different conclusions that emerge when gender and sustainability perspectives are brought together.

The talks are diverse and cover theoretical considerations as well as empirical research and impacts on practice. They can be understood as impulses that aim to inspire and reflect on habitual patterns of thinking.

**Everyone interested is welcome!**

The talks on the 22<sup>nd</sup> of October, 5<sup>th</sup> of November and on the 4<sup>th</sup> of February will be held in English, all others in German.
